SUMMARY

Senior Backend Engineer with 6+ years of experience designing distributed, cloud-native data platforms. Deep expertise in Python and FastAPI building high-throughput data pipelines built for scale, reliability and low latency. Currently building agentic AI systems with LangChain, RAG pipelines and vector databases. Backend-first, with cross-functional reach into frontend and DevOps via AI-assisted workflows. Recognized as top 3% global talent by Toptal.

EXPERIENCE

Software Engineer

Anyscale

06/2026 - Present Bengaluru, India

- Building sandboxed AI coding agents on the MLDevX team that autonomously handle software tasks end-to-end within safe, isolated execution environments where agents run, test, and iterate on code without impacting production.
- Developing agents that turn a single Slack message into a scoped JIRA ticket, gather context from internal documentation, implement the required code changes, and open a PR for review.

Member Of Technical Staff - 3

Akridata

01/2024 - 04/2026 Bengaluru, India

- Shipped an image clustering microservice on AWS, processing 500K+ images for the National Library Board, Singapore.
- Designed and owned a centralized API Gateway layer integrated with Kubernetes Ingress, handling 850K+ requests/day.
- Implemented stateless JWT validation using Keycloak JWKS and API-key-based access control, enabling secure multi-tenant routing.
- Optimized the Job List API by performing API profiling across the request execution path, reducing p99 response latency from ~20s to under 2s.
- Contributed to frontend and DevOps tasks using Claude AI agents, reducing bottlenecks in different teams.

Member Of Technical Staff - 2

Akridata

01/2022 - 12/2023 Bengaluru, India

- Pioneered FastAPI adoption org-wide, leading to it becoming the standard for 15+ microservices.
- Engineered distributed data-synthesis services for TB-scale manufacturing datasets with automated job scheduling, retry recovery, and metadata tracking across the full ML lifecycle.

Member Of Technical Staff - 1

Akridata

01/2020 - 12/2021 Bengaluru, India

- Eliminated memory exhaustion for a 30 GB session by redesigning the S3 result fetcher to use streaming batches.
- Designed and shipped RESTful APIs for job management, clustering, and blob activity stats.

SKILLS

Python

Kubernetes

AWS

FastAPI

Distributed Systems

PostgreSQL

MongoDB

Redis

GIT

Jenkins

Microservices

Docker

Keycloak

JWT

CI/CD

REST APIs

Celery

RabbitMQ

Helm

LangChain

RAG

Vector Databases

AI Agents

PROJECTS

Real Estate Intelligence Platform — RAG System with Web Scraping

https://github.com/shinchan6599/GujRERACrawler

Real Estate Intelligence Platform focusing on regulatory datasets

- Scraped and ingested the entire Gujarat RERA portal including 16,878 real estate projects, 7+ GB of structured and unstructured data into a local database.
- Built a RAG-based Q&A system enabling context-aware querying over project registrations, compliance documents and developer records over 1 million+ vector embeddings.

KEY ACHIEVEMENTS

Toptal Network (Top 3% Global Talent)

Accepted into top global engineering talent pool after multi-stage screening

ACM ICPC All-India Rank 41

Ranked 41st across 3,500+ teams at ACM ICPC in 2019. 4 Star at Codechef. Expert in Codeforces.

EDUCATION

B.Tech in Computer Science

Ahmedabad University

08/2016 - 04/2020 Ahmedabad, India
